

Public dissemination of research projects

The following Universitat Autònoma de Barcelona channels are available to researchers interested in communicating their projects:

UAB channels:

- **UAB website** (www.uab.cat)

Outstanding results will be published through communications made on the UAB website. The website appears in three languages (Catalan, Spanish and English) and the “Research” section includes the latest news on research conducted at the UAB.

- **UABDIVULGA electronic journal** (www.uab.cat/uabdivulga)

Science popularisation articles about the project, written by the researchers themselves, can be published in the electronic journal *UABDIVULGA*. The journal includes scientific articles on research results published in leading journals, on new research and innovation projects, conferences, seminars and books. Since it is a periodical publication, it has its own ISSN.

- **Social Networks**

Research results considered to be of interest to the general public are published in social networks, mainly in UAB's *Twitter* and *Facebook* accounts. (@UABBarcelona, <https://www.facebook.com/uabbarcelona>)

External channels:

- **National media channels**

The most important research results which can be of interest in the media will be disseminated. Press meetings can be organised and press releases are sent to media journalists from all over Spain.

- **International Media**

We use two international communication agencies, Alphagalileo and Eurekalert, and we send press releases of research results with international scope to the main scientific journalists from around the world.
